

SmartFlow AI – Intelligent Traffic Management System

AI-powered cameras and sensors monitor roads in real time, automatically adjusting signals, predicting congestion, and suggesting faster routes — transforming how cities move.

 **The Problem**
Traffic jams waste time and fuel in cities, increasing pollution and delaying emergency vehicles.

 **The AI Solution**

- Adjusts traffic signals automatically
- Predicts heavy traffic before it builds
- Suggests faster routes to drivers

 **Target Users**
Drivers, traffic police, and smart city authorities.

Technologies

- Python
- Machine Learning
- Cameras & Sensors
- Traffic Data Analysis

Societal Impact

- Reduces traffic jams
- Saves fuel
- Lowers pollution
- Improves emergency response

The SmartFlow AI pipeline moves from raw sensor data collection through model training and rigorous accuracy testing, culminating in a fully deployed smart signal network across city intersections.
